

## Azure 104 Module 6, Hands On – 10

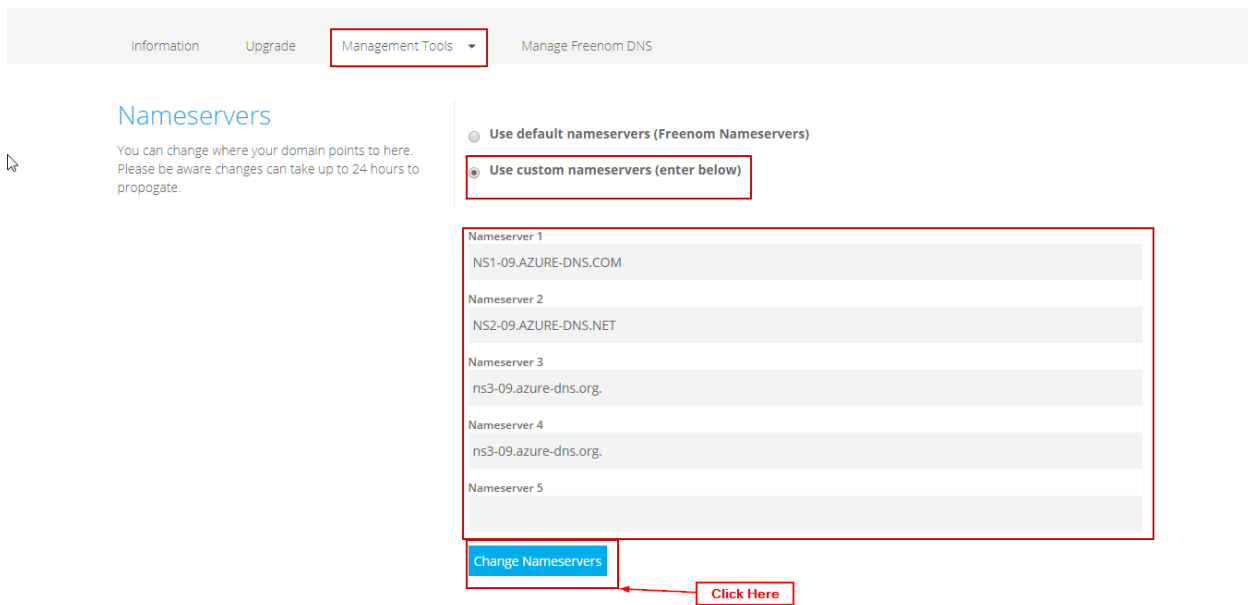

### Add Record Set to DNS.

**Step 1:** Open the DNS Zone and copy Name Server Addresses.

The screenshot shows the Azure portal interface for a DNS zone. At the top, there are action buttons: '+ Record set', '→ Move', 'Delete zone', and 'Refresh'. Below these, the resource group is 'test2', the subscription is 'Free Trial', and the subscription ID is 'b9be3eac-a886-420f-88c4-c8a6156af111'. On the right, a list of name servers is displayed: 'Name server 1: ns1-09.azure-dns.com.', 'Name server 2: ns2-09.azure-dns.net.', 'Name server 3: ns3-09.azure-dns.org.', and 'Name server 4: ns4-09.azure-dns.info.'. A red box labeled 'Nameserver Address' points to the list of name servers.

**Step 2:** Change the name server addresses in your domain name provider website.

The screenshot shows the Freenom DNS Management Tools interface. The 'Management Tools' tab is selected. Under the 'Nameservers' section, there is a note: 'You can change where your domain points to here. Please be aware changes can take up to 24 hours to propagate.' Below this, there are two radio buttons: 'Use default nameservers (Freenom Nameservers)' and 'Use custom nameservers (enter below)'. The 'Use custom nameservers (enter below)' option is selected. A list of five name servers is shown: 'Nameserver 1: NS1-09.AZURE-DNS.COM', 'Nameserver 2: NS2-09.AZURE-DNS.NET', 'Nameserver 3: ns3-09.azure-dns.org.', 'Nameserver 4: ns3-09.azure-dns.org.', and 'Nameserver 5:'. A red box labeled 'Click Here' points to the 'Change Nameservers' button.

**Step 3:** Open the DNS Zone and click on '+ Record Set'.

Home > DnsZones-Arm - Overview > intellipaat.tk
